Portfolio: justaman045.vercel.app

Summary

Results-driven Software Development Engineer in Test (SDET) with 4.5 years of experience designing scalable test automation frameworks across API, mobile, desktop, and manual Quality Assurance (QA) domains in enterprise retail and supply chain systems. Architected a client-recognized unified framework integrating REST Assured into an Appium suite via shared MessageFactory classes — achieving cross-platform coverage with zero structural refactoring. Independently performed root cause analysis on 200+ failing Selenium and WinAppDriver scripts, restoring full regression coverage in under 6 weeks with direct client recognition. Promoted twice within Infosys for consistent delivery across 5 project tracks. Skilled in Java, REST Assured, Appium, Selenium, TestNG, Kafka, SQL, Jenkins, and CI/CD pipelines across the full STLC in Agile and DevOps environments. **Notice period: 90 days — Open to early release.**

Technical Skills

Automation Testing: Selenium WebDriver, Appium (Mobile/Android Automation), WinAppDriver (Desktop Automation)
API & Services Testing: REST Assured, Postman, REST API, JSON Validation, Microservices Testing
Programming Languages: Java, Python
Test Framework Design: TestNG, Page Object Model (POM), Maven, Framework Architecture, Design Patterns
CI/CD & DevOps: Jenkins, GitHub Actions, Git, GitHub, Continuous Integration, Continuous Delivery
Messaging & Data Validation: Apache Kafka, SQL (MySQL, Microsoft SQL Server), Data-Driven Testing, Test Data Management
Cloud & Databases: Azure Cosmos DB, Azure
Reporting & Logging: Extent Reports, Allure Reports, Log4j
Test & Defect Management: Jira, Confluence, Root Cause Analysis (RCA), Test Strategy, Test Planning
Testing Expertise: Functional, Regression, Integration, End-to-End, Smoke, Sanity, UAT, Acceptance Testing, API Testing, Data Validation
Methodologies: Agile, Scrum, STLC, SDLC, Shift-Left Testing, Quality Assurance (QA), DevOps
Domain Knowledge: Retail Systems (RMS/RPM), Supply Chain, Inventory Management, Cross-Platform Testing

Experience

Infosys Ltd. Oct 2021 – Present
Systems Engineer | Promoted: Operations Executive → Systems Associate → Systems Engineer Gurgaon, Haryana
QA Automation Engineer — Coles (MATE Project, Wave 3 | Current)

- Architected a scalable, unified test automation framework integrating REST Assured API testing into the existing Appium mobile suite via shared MessageFactory classes — enabling cross-platform API and mobile test coverage with zero codebase refactoring, recognized by the client for significantly accelerating test delivery.
- Designed and automated API validation pipelines for the Goods In Transit module, achieving complete test coverage across microservices request/response flows, field-level data integrity checks, and end-to-end inventory workflow accuracy.
- Engineered reusable helper classes and utility methods within the MessageFactory architecture, eliminating repetitive API setup boilerplate and enabling faster onboarding of new test scenarios each sprint.
- Produced human-readable Extent Reports with structured per-field validation logs, enabling developers to pinpoint and resolve automation failures faster across every continuous integration regression cycle.

Mobile Automation Engineer — Coles (MATE Wave 2)

- Owned end-to-end Android mobile test automation for 3 retail store modules using Appium, Java, TestNG, and Page Object Model (POM), delivering a stable suite across inventory management, rework processing, and item operations.
- Conducted root cause analysis (RCA) to diagnose a critical protocol incompatibility in the locationsv2 data connection layer and rewrote affected logic across 22 test cases in the Rework module, restoring 100% automation coverage.
- Resolved automation failures across 3 modules (Rework, Item Lookup, Store Use) by systematically debugging broken test logic, maintaining suite stability through concurrent development sprints.
- Drove 6 regression cycles to completion in an Agile/Scrum environment, raising pull requests for all module fixes and ensuring zero unreviewed changes entered the codebase before each release.

Desktop Automation Stabilization — Retail Management System (RMS)

- Diagnosed and assumed full ownership of a 200+ script desktop automation suite degraded to near-zero pass rate, after identifying that multiple system releases had broken element locators across all test modules.
- Performed systematic root cause analysis (RCA) across all 200+ failing scripts, categorizing failures by type (locator changes, deprecated API calls, broken hierarchies) to define a priority-based fix sequence.
- Updated element locators, corrected deprecated API calls, and resolved broken test logic across every affected module, restoring complete regression suite coverage in under 6 weeks and earning direct client recognition.

Manual & Functional QA – Coles (Blue Yonder SSS Initiative)

- Championed shift-left testing practices by joining client-facing BA refinement calls, embedding QA and test strategy perspective into requirements definition to eliminate defect injection at the source.
- Independently authored High-Level Test Scenarios (HLTS), end-to-end test cases, and UAT/Acceptance Testing scripts from user stories, delivering a complete Confluence-to-Jira documentation trail from requirements through execution.
- Executed functional, regression, smoke, and sanity testing for retail store space-planning features, validating every user story against acceptance criteria and achieving zero defect escapes across all production releases.

Backend QA – FiveBelow (Retail E-commerce)

- Applied a data-driven testing methodology to validate end-to-end Purchase Order creation pipelines, running Kafka-based Python scripts and SQL queries to verify data accuracy at every stage from CSV ingestion through database confirmation.
- Engineered test data environments by scripting CSV-to-database loads via SQL, validating referential integrity and record counts before each cycle to ensure reliable, repeatable test runs.
- Partnered with developers to perform root cause analysis on data pipeline failures, isolating root causes via targeted SQL queries and Kafka event tracing before production sign-off.

Codedamn

Sep 2022 – Feb 2023

Technical Writer

Remote

- Authored 15+ technical articles on software testing, automation, and development, accumulating 4000+ reads across Dev.to and Hashnode publications.

Projects

NextRound – AI Resume Builder SaaS | Next.js 16, Firebase, OpenRouter, Razorpay, Puppeteer, Playwright

- Built a full-stack SaaS for AI-powered resume building, ATS optimization, and cover letter generation with 4 templates, GitHub/LinkedIn import, and DOCX/PDF export via Puppeteer and Razorpay subscription billing.
- Implemented end-to-end test automation with Playwright and unit tests with Vitest, establishing a CI/CD-integrated regression suite that validates payment and resume generation flows before every release.

WealthSync – Personal Finance Android App | Flutter, Firebase, GetX, Riverpod, ML Kit, RevenueCat

- Shipped a production Android app (v2.0.118) with on-device SMS parsing via ML Kit OCR, UPI via Kotlin MethodChannel, 24 asset types, freemium Pro tier (Rs.249/mo via RevenueCat IAP), and GitHub Actions CI/CD.

Assistant – Personal Productivity SaaS | Next.js 15, Firebase, OpenRouter, Razorpay, Sentry, PostHog

- Built a multi-feature productivity SaaS with SSE-streamed OpenRouter AI, a cross-feature memory extraction system, server-side credit enforcement via Razorpay, and Sentry + PostHog production monitoring.

Education

Amity University (Online)

2021 – 2023

Master of Computer Applications

Online

IMS Ghaziabad

2018 – 2021

Bachelor of Computer Applications

Ghaziabad, Uttar Pradesh

Courses and Certificates

Spring Boot API Development & Testing - REST Assured and Postman for Spring Boot API Testing

Mobile Testing - Appium and Flutter for Android and iOS Test Automation
